

Waypoint Advisory Business Continuity Solutions

Web Planner Express

Web Planner Express provides a web-based planning framework enabling organizations to quickly build a business continuity plan that is maintainable and accessible at any time, and from any location with an Internet connection.

Based upon Windows SharePoint, the Web Planner Express product includes a customized portal for your crucial business continuity documents, as well as pre-defined and easily editable procedures for preparedness, emergency response, and restoration activities associated with your personnel and technology. The structure allows you to easily organize and maintain key information about your technology assets, employees, and other salient data in a database format which is easily updated using convenient forms, or by editing in Excel, or by way of upload to the site. Of course, your existing continuity and recovery documents can be uploaded to the Web Planner Express site thus preserving your previous investment and avoiding tedious data entry. The best-practices based disaster recovery plan framework, including departmental plans, assures you of consistent and usable BC/DR information.

Web Planner Express also includes databases for creating and maintaining business impact analysis and risk assessment information, and for managing your business continuity teams and roles. The personalization feature enables a user to immediately view their assigned emergency response and resumption activities upon login to the system.

Of course, the full complement of Windows SharePoint features are available including calendars, scheduling, task management, email emergency alerts, forums, site searching, and many other capabilities. In particular, the familiar SharePoint interface and tight Microsoft Office integration will delight individuals involved in the business continuity program who can be productive right away without training, and since we host Web Planner Express, you can avoid the hassle of length software deployments and maintenance costs.
